

Approved Synthetic Press SOP

Owner: Fixture Safety Office · Version 4.2 · Effective 1 September 2026

Authority	controlled_internal
Approval	Fixture Safety Owner — approved
Scope	Supervised software-validation exercise only

1. Entry and protective equipment

An authorized trainer must be present before the practice zone is opened. Wear splash goggles and safety shoes before starting.

2. Controlled synthetic setting

Synthetic training pressure setting = 0.55 MPa

Use this fictional value only inside the synthetic fixture. It intentionally conflicts with an archived training deck so authority resolution can be tested.

3. Guard and warning controls

■■■■■■■■■■■■■■■■■■■■ Do not open the guard door while the synthetic machine is running.

If the simulated warning beacon illuminates, stop the exercise and report the event to the trainer.

4. Pre-start sequence

Confirm the guard is closed; verify the training label; record the simulated pre-start inspection; then wait for trainer release.

Evidence continuation

The second page gives the fixture a stable page-level evidence location. It introduces no replacement pressure setting.

Device-grounding limitation

This controlled text does not confirm a real device image, component anchor, control point, or operation region. Production use remains blocked until responsible human review supplies that grounding.
