

Controlled Practice SOP

Synthetic Training Machine · Document owner: Fixture Safety Owner

Source class	controlled_internal
Version	2.0
Effective date	1 September 2026
Scope	Simulated author-review evaluation only

1. Controlled synthetic setting

Synthetic training pressure setting = B

The letter B is a fictional comparison token. It is intentionally incompatible with the old deck's letter A so the conflict resolver can be tested without publishing a hazardous real-world parameter.

2. Simulated exercise sequence

1. Confirm the trainer has opened the practice session.
2. Select the fictional setting B on the training card.
3. Stop when the simulated warning beacon appears.
4. Record the observation and wait for trainer release.

3. Production limitation

This SOP is synthetic evidence for software validation. It does not identify a real device or a confirmed operation region. Production training must remain blocked until a real approved source and real-device anchor are reviewed by a responsible human.

Evidence-location test page

This second page exists to validate page grouping and page-level EvidenceRef locations. It repeats no setting value.
